

Accelerate Time to Cloud Value with Powerful Automation & Analytics

Make the best decisions for your business faster, easier, and with confidence at each phase of your cloud journey, so you can more quickly realize your cloud ROI. Whether you're migrating physical, virtual or cloud-based workloads to the cloud, it's always going to be a multi-step process...

Assess ▶ Plan ▶ Migrate ▶ Validate ▶ Manage

...Without automation, analytics and seamless integration points between steps, migration projects can be time intensive, risky and costly. Even though each migration project has its own unique set of challenges, the right platforms or solutions working in synergy can minimize the complexities and friction points that occur on the path to cloud. Cloudamize and RiverMeadow Cloud Migration SaaS break down the walls standing between the isolated steps to deliver a seamless integrated solution for cloud migration and ongoing cost management.

Cloudamize provides powerful analytics and automation for the pre- and post-migration steps that consist of planning, assessing, validating and managing while RiverMeadow SaaS focuses on the migration stage—automating the core process of collecting, converting and deploying the application stack from the source to the target cloud environment.

Both SaaS based platforms, Cloudamize and RiverMeadow are conveniently accessible from the web. A simple handshake of move group data from one to the other makes it effortless for the two solutions to work together to migrate applications to target AWS and VMware environments and then manage them in the cloud. Run as many concurrent migrations as needed and receive detailed analysis and feedback on each workload in the application move group during each phase of the process.

Together, Cloudamize and RiverMeadow Cloud Migration SaaS give you process automation and cost optimization, so you can improve the ease, speed, and accuracy of moving to and operating in the cloud.

Key Values

Accelerate Migration to Cloud

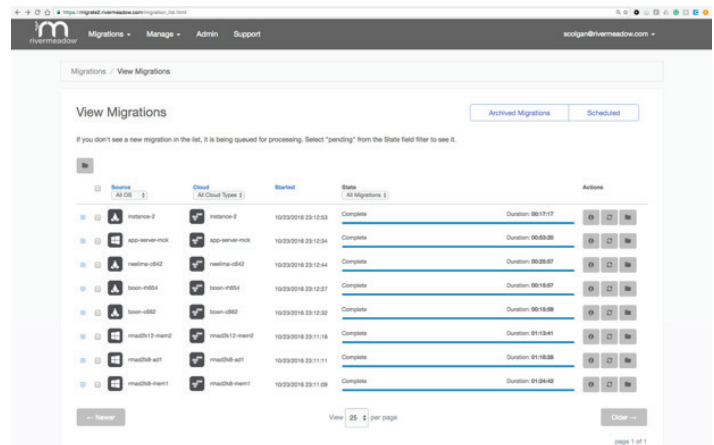

More quickly and accurately plan and execute your move to the cloud.

Achieve Cost Clarity & Control

Understand, project, control, and lower overall cloud costs.

Shrink Change Windows & Downtime

Migrate application stacks to the target cloud environment with no downtime or manual configuration.

Five Simple Steps to Achieving Success in the Cloud

Assess

Calculate and compare precise TCO calculations across Amazon Web Services (AWS), Azure, and Google Cloud Platform (GCP) based on a detailed infrastructure performance analysis, so you can identify your best-fit cloud vendor and accurately forecast cloud costs.

Plan

Automate the discovery of applications and assess dependencies and cloud suitability for each, so you can prioritize applications for migration and efficiently build a successful roadmap to the cloud.

Migrate

Automate the core migration process by importing your Cloudamize move group to RiverMeadow SaaS. RiverMeadow will run migration readiness checks on your sources to ensure the target environment is ready to support and receive them. Once verified, RiverMeadow will collect hot clones of your application move groups, securely transiting, converting and depositing them into the destination cloud.

Validate

Ensure that your application connections are operating in the cloud as they should be and receive recommendations on how to address any issues.

Manage

Analyze billing data, build chargebacks, identify waste, plan capacity, and right-size your cloud workloads to understand, control, and optimize your cloud costs on an ongoing basis.
